VEGETABLES - FRESH MARKET

ANNUAL SUMMARY

1958

Production of the 28 principal fresh market vegetables and melons in 1958 was 4 percent more than in 1957, the Crop Reporting Board announced today. The 1958 production of 212.3 million hundredweight compares with 204.8 million hundredweight in 1957 and was 3 percent above average. Several important crops came through with substantially larger supplies in 1958 than a year earlier including broccoli, cabbage, sweet corn, cantaloups, and watermelons. Production of celery, onions and tomatoes was considerably below the 1957 output while slightly smaller crops of asparagus, snap beans, cauliflower, cucumbers, and green peppers were produced. Value of the principal vegetable and melon crops totaled \$745,555,000 in 1958. This is 12 percent under the record high value of these crops in 1957 but about equal average.

Strawberry production in 1958 at 534.4 million pounds was 4 percent below the record large 1957 crop but 27 percent above average. Value of the 1958 crop was \$85,415,000 - up 10 percent from 1957.

The leading fresh market vegetable States in 1958 are indicated below.

Rank	Acreage		Production		Value	
	State	Percent of total	State	Percent of total	State	Percent of total
1	California	19.7	California	29.7	California	37.5
2	Texas	15.5	Florida	12.3	Florida	14.7
3	Florida	14.7	Texas	10.3	Arizona	9.0
4	Georgia	5.2	New York	6.6	Texas	7.3
5	Arizona	5.1	Arizona	6.5	New York	4.9

The estimates in this publication relate primarily to fresh market production. While the estimates for many of the vegetable crops include only fresh market production, those for a few crops, such as broccoli and carrots, include substantial quantities processed. For asparagus and strawberries, which are perennial crops providing production for both fresh-market and processing outlets from the same acreage, a utilization breakdown is given in addition to total production. "Acreage for harvest" in this summary embraces total acreage available for harvest, including mature acreage abandoned or only partially harvested because of low prices or other economic factors. "Value" is for the marketing season or crop year and does not correspond to calendar year income. Group and All States averages are simple averages of annual data.

This summary, issued by the Crop Reporting Board, provides fresh market estimates of acreage, production, and value for the 28 principal vegetables and melons grown commercially in the more important producing States. These estimates provide basic statistics on 81 percent of the national output of vegetables and melons grown for fresh market sale. Fiscal limitations prevent including all vegetables in all States in this program. Estimates of mint for oil and strawberries are also in this report. These data are based upon information secured by State Agricultural Statisticians from growers, shippers, processors, public agencies, and other source.
